

# 2022 Reimbursement Reference Guide

**Remote Patient Monitoring (RPM)** refers to the use of mobile monitoring devices that transmit vital sign data securely to health care providers in a different location for assessment and recommendations.

---

**Chronic Care Management (CCM)** is intended for individuals with two or more chronic conditions expected to last at least 12 months.

**Non-Complex, Chronic Care** CPT codes are meant for care given by Non-Physician Practitioners (NPPs). These codes cannot be used concurrently with Complex Chronic Care CPT codes.

**Complex, Chronic Care** CPT codes are based on complexity of medical decision-making and duration of service.

---

**Remote Therapeutic Monitoring** is nearly identical to RPM with the addition of self-reported information. Uses suggested by CMS include medication adherence, pain management, or therapy adherence such as use of an inhaler for individuals with asthma.

---

**Principal Care Management** is similar to CCM, but intended for patients with one chronic condition that needs specialist intervention.
